

Claim Amendments

Claim 12 has been amended. Claims 16-19 are canceled. Claims 13-15 are unchanged. The following listing of claims replaces all previous versions of the claims in the application.

Listing of Claims

12. (currently amended) A method for preventing intrusions to a computer system, comprising:

- using a network-based appliance to intercept data packets;
- deciding whether to forward the intercepted packets or whether to route the intercepted packets to a virtual proxy;
- performing TCP or UDP processing on the intercepted packets before routing them to the virtual proxy;
- using the virtual proxy to analyze the packets that have been routed to the virtual proxy to detect intrusions using a processing engine having at least one processing procedure that detects intrusions; and
- when the virtual proxy detects an attack or violation in the packets, using the virtual proxy to direct a transport layer to modify the packets.

13. (previously presented) The method defined in claim 12 wherein using the virtual proxy to direct the transport layer to modify the packets further comprises:

modifying data in the packets at specified locations.

14. (previously presented) The method defined in claim 12 further comprising using the virtual proxy to direct the transport layer to remove data from the packets when the virtual proxy detects an attack or violation.

15. (previously presented) The method defined in claim 12, wherein the virtual proxy directs the transport layer to modify the packets using packet stream modification requests, the method further comprising sending the packet stream modification requests from an active network-based appliance to a standby network-based appliance to support fault tolerance.

16-19. (canceled)
